

ABSTRACT OF THE DISCLOSURE

A probe card transporting apparatus includes a moving mechanism to transport a probe card with a card holder to a clamp mechanism in a prober chamber.

5 When mounting and demounting the probe card with the card holder through a first positioning pin, this moving mechanism uses a support which mounts the probe card with the card holder. The support fits a second positioning pin supported by a swingable supporting means in a second opening formed in the card holder.

10 A second positioning pin has a spherical top.
